#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 101 and 112

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 15-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 15 provides for the use of an immobilized fragrance, but since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. Similarly, Claims 16 and 17 provide for the use of an esterified polysaccharide, but do not set forth any steps involved in the method. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 15-17 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Application/Control Number: 10/069,551

Art Unit: 1615

It order to advance prosecution, Claim 15 will be treated as a method of using an immobilized fragrance, and Claims 16 and 17 will be treated as methods of immobilizing a fragrance using an esterified polysaccharide.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 5-7, 9, 11, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Dihora *et al.* (U.S. Patent No. 6,608,017 B1)

The Dihora *et al.* patent teaches processes for encapsulating oil particles using modified starches (See Abstract). Substances to be encapsulated include essential oils and fragrances (See Column 2, Lines 22-33). In preparing the encapsulated oil particle, a hydrophobic additive is first dispersed within the oil, which is then emulsified with a water-soluble polymer (See Column 2, Line 55 to Column 3, Line 3). Suitable hydrophobic additives include hydrophobic starches. Hydrophilic polymers that have been surface-treated to render them hydrophobic may also be used (See Column 4, Lines 19-39). Suitable water-soluble polymers include modified starches, including starch esters of long-chain hydrocarbons, starch acetates, and starch octenyl succinate (See Column 6, Line 53 to Column 7, Line 8). Various dehydration processes may be

Application/Control Number: 10/069,551

Art Unit: 1615

used to obtain the encapsulated oil particles, including horizontal vacuum rotary drying, and spray drying (See Column 7, Line 58 to Column 10, Line 16).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dihora et al.

The relevant portions of the Dihora *et al.* patent are discussed in the above rejection under 35 U.S.C. 102.

The examiner does not see a patentable distinction between what has been disclosed by the instantly claimed process and the prior art.

Claims 2, 4, and 8 are not considered critical features by the examiner, as the prior art has disclosed the broadly defined process of Claim 1 in the manufacture of encapsulated oil particles.

Claim 10 refers to characteristics of a polysaccharide. In the view of the examiner, the selection of a polysaccharide that fits such a broadly recited limitation is well within the purview of one of ordinary skill in the art.

Claims 12 and 13 make reference to "the immobilized fragrance"; the examiner interprets that phrase to refer to the finished product. The examiner interprets Claims 12 and 13 to recite an intended use of a product, and as such, they are not given patentable weight.

Correspondence

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Simon J. Oh whose telephone number is (571) 272-0599. The

examiner can normally be reached on M-F 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thurman K Page can be reached on (571) 272-0602. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
